

## A division of Drake Auto Reconditioning

A well detailed car sells fast. But after sitting on the lot a few days, it will get dusty and less appealing. A fresh rinse with deionized water is all it takes to keep it looking fresh.

We use deionized water because it dries spotlessly. Every car on the property looks like it was just detailed that morning. They sell faster and survey scores go up.

Contaminants like construction dust, sprinkler overspray and bird droppings can damage the clear coat if not removed soon enough. We keep that from happening.

Regular dust and pollen can make the car just seem dirty and less desirable. Often, detail departments can't keep up with this important task and customers are lost because no one buys a dirty car.

:K&M DN

- We only used deionized water so no spots and no scratches from over wiping
- We carry GL Ins and Workers Comp
- We don't allow our hoses to scratch the cars
- We work early morning hours to keep out of the way
